

The future of newspaper printing at the touch of one button.

The revolution in newspaper printing has started and manroland is leading the way with **One Touch** technology.

We've already made significant advances with the introduction of our **autoprint** presses. But our goal is the complete automation of newspaper production including makereadies, production changeover and maintenance.

This will truly be One Touch printing and the savings in time and money will be significant. The future is with manroland. WE ARE PRINT.®
